Criminal organisations are increasingly using legitimate companies and adopting complex cross-border structures to cover illicit activities and to conceal money laundering, corruption and other financial crime schemes.

Project **DATACROS II**, co-funded by the European Commission (*ISF Police 2020-AG-CORRUPT-101038736*), has developed the DATACROS tool, a platform that supports financial crime investigations by detecting anomalies in the characteristics of companies that can flag high risks of collusion, corruption and money laundering. The tool has been used by several public authorities in the EU (law enforcement agencies, anti-corruption and competition authorities), and by investigative journalists to conduct successful financial crime investigations.

This webinar will be a unique opportunity to:

- **Present the key findings** from the project, and understand which characteristics of legitimate businesses can be read as risk factors and red flags for corruption, collusion, money laundering and financial crime;
- **Demonstrate use cases** in which the DATACROS tool has been successfully used for assessing risk of corruption or other financial crimes;
- **Discuss with practitioners** how this tool could be useful in financial crime investigations and risk assessment.

AGENDA

Welcome and introduction | 10.00

Ernesto Savona, Transcrime - Università Cattolica del Sacro Cuore

European Commission presentation | 10.05

Giulia Caselli, European Commission - DG HOME (TBC)

Results of DATACROS II - Understanding financial crime risks and corporate anomalies | 10.15
