

Back-end and API developer / Data scientist

May 2022

Description

We are looking for an IT developer/data scientist to be involved in our team for supporting the development, creation, customisation and management of the back-end and the development of APIs related to web-based dashboards employed for data analysis and investigations in the anticorruption and anti-financial crime field.

Transcrime is the Joint research centre on transnational crime of the Università Cattolica del Sacro Cuore. Crime&tech is the spin-off company of Università Cattolica-Transcrime, which translates Transcrime research in analyses, models, applications for the assessment, prevention and mitigation of crime and security risks.

What you will do:

- Support to the development, creation, customisation and management of the back-end of web-based dashboards
- Support to the development and management of APIs
- Support to activities related to the scraping, extraction and organisation of unstructured information
- Programming in R/Python for KPI calculation
- Joint work with data scientists and researchers to implement their models within the dashboard

Basic requirements:

- BSc/BA in Information technology, statistics, engineering, or related subjects (completed or ongoing)
- Knowledge of Python and R
- Experience in data analytics
- Use of database (postgres) and basic knowledge of SQL

Preferred requirements:

- Knowledge in developing and implementing API RESTful
- Knowledge of R/SHINY
- Basic knowledge of Linux
- Previous experience in processing company data
- Good knowledge of English
- Interest in business intelligence/compliance/anti-financial crime

Salary and type of contract/involvement will be defined according to curriculum, seniority and availability of the candidate.

Workplace: Milan city centre, Via San Vittore 43, with possibility of remote working.

Candidates can send their application to transcrime@unicatt.it – Subject: “Application as Back-end and API developer” attaching:

- CV
- Cover letter
